Career Summary

Summa Labs (former Anoxtech) 2013 April > 2018 October

Action Script Developer (3 years)

Mid-libraries used for maintaining and glueing backend-frontend communication

Frontend Javascript Developer (1 year)

Web client for real-time chat/audio/video communication.

Node.js Backend Developer (4 years)

Backend that was supplied with users from 3rd party server. Server was replicating users with relevant data, maintained realtime socket sessions and communicated with frontend clients.

Scrum Master(3 years)

Introduced teams with scrum framework. Participated in SDLC as Scrum master and been Scrum master in multiple teams. When company first started using Agile my assignment (along with few other people) was to try to implement the framework. Belgrade office is now using scrum as default framework for project development.

Elixir Backend Developer (2 years)

Maintain and expand service oriented backend developed in elixir.

Elixir Team Lead (1year 6months)

Recruit and develop team of elixir developers to continue maintenance and development of backend. After one year project was declared successful and junior team as independent development group that can be guided by single senior instance.

EDUCATION

ICT College of vocational studies in Belgrade

Internet Technologies

ABOUT ME

During my career I worked on multiple huge real-time chat/audio/video servers in teams and by myself. I would like to keep evolving and learn more so I could polish my skills and share my own experience. If I could pick one thing in my next workplace it would be to work with friendly people that have more experience than I do and that they are willing to share it. I am aware that my CV is more on backend side and that I have no experience with various framework and libraries on frontend but with good colleges I would be up to speed real fast since I consider myself capable of acquiring various developments concepts. Having gap between older and latest frontend libraries is opportunity for me to get up to date and having solid background on backend is chance to easily understand client challenges.
